Preface

Abstracts in alphabetical order

Nitrification inhibitors as tool for reduction of greenhouse gas emissions	1
Nils Berger	
Combined use of manure and mineral fertilizers in conventional grain production	3
Anne Kari Bergjord Olsen	
The significance of sulfur nutrition and metabolism in the detoxification of excessive levels of copper, zinc and molybdenum in plants	4
Luit J. De Kok, Mariana I.F. Neves, Dharmendra H. Prajapati, Muhammad Shahbaz, Tahereh Aghajanzadeh and C. Elisabeth E. Stuiver	
Impact of Climate Change on N-cycling in colder climates	5
Peter Dörsch	
Phosphorus utilization in mixed-cropping systems	6
Bettina Eichler-Löbermann, Christine Brandt, Phillipp Stahn, Stephanie Busch, Timo Prange and Ralf Uptmoor	
Potential of manure injection to increase N and P use efficiencies in maize	7
Carl-Philipp Federolf, Matthias Westerschulte, Hans-Werner Olf and Dieter Trautz	
Organic wastes as phosphorous fertilizers in organic agriculture	8
Bente Føreid	
Variable rate application of manure – gain or pain?	9
Silvia Haneklaus, Judith Schick, Sylvia Kratz and Ewald Schnug	
Phosphorus management and material flow analysis	10
Ola Stedje Hanserud	
Control of NH₃ volatilization and nitrogen leaching by application of coated urea associated with properties of the coated materials	11
Zheng-yi Hu, Hui-hui Wang, Jing Mu, Xiang-ru Zhang and Guox-xi Wang	
The suitability of soil temperatures on the Baltic coast for viticulture	13
Juha Karvonen	

Use of multiple sensors to determine multiple, co-occurring wheat stressors	14
Audun Korsaaeth, Krzysztof Kusnierek, Therese With Berge, Andrea Ficke, Jan Netland	
Optimal use of phosphorus in cereals under Nordic conditions	15
Annbjørg Øverli Kristoffersen	
Hyperspectral, multispectral or index – How much spectral resolution do we need for vegetation parameter estimation from spectral data?	17
Holger Lilienthal, Heike Gerighausen and Ewald Schnug	
Implications of chemical waste water treatment on efficient P cycles in food production	18
Anne Falk Øgaard	
The influence of silicic acid on the chemical content of field peas of variety Mehis	19
Margit Olle	
Marine protection and fertilizer strategies	20
Hans Marten Paulsen	
The Danish experience: The consequences of reducing the nitrogen input below the optimal rates of the crops	21
Carl Aage Pedersen	
Nutrient interactions serve extra benefit: improving uptake, minimizing losses through balanced nutrient ratios	24
Maksim Poltoradnev and Tatyana Grebennikova	
Economic and environmental optimization of nitrogen fertilizer recommendations for cereals in Norway	25
Hugh Riley, Bernt O. Hoel and Annbjørg Ø. Kristoffersen	
Residual value of inorganic fertilizer and farmyard manure for crop yields and soil fertility after long-term use on a loam soil in Norway	27
Hugh Riley	
Organic matter dynamics and carbon sequestration in relation to fertilizer use in temperate regions	28
Bal Ram Singh	
Phosphorus recycling through fertilizers	29
Andrea Ulrich	
Soil nitrogen dynamics in maize field trials after slurry injection compared to broadcast application using a new sampling strategy	30
Matthias Westerschulte, Carl-Philipp Federolf, Dieter Trautz and Hans-Werner Olf
