

Table of Contents

Preface	8
Summary <i>H.-J. Wehmann</i>	10
Acknowledgement	12
Introduction to the Workshop <i>P. Balsari</i>	13
Inspections of pesticide application equipment: Provisions and current implementation under the Directive on sustainable use of pesticides and other European legislation <i>K. Nienstedt</i>	16
ISO 16122 : A harmonized standard for the inspection of sprayers in use <i>V. Polvêche</i>	17
The experience of the introduction of the inspection of sprayers in use from one Member State's point of view <i>A. Fjelstedt</i>	18

Session 1: Inspection at regular intervals – Inspection of new equipment (TWG 1)

Inspection of brand new sprayer by a sprayer manufacturer and problems encountered <i>T. Kovermann</i>	20
Conformity of Production Processes of Field Sprayers <i>P. Hloben</i>	23
Inspection of New Sprayers before their Delivery - The position of CEMA <i>C. Schulze Stentrop</i>	30

Session 2 : Train application – State of the art and parameters to be inspected (TWG 7)

Testing of weed seeking systems for spray trains - development of a test procedure 34

J. K. Wegener, D. Rautmann, B.Pály, A. László

Session 3: Correct use of sprayer inspection harmonized test methods and definition of additional test methods for application equipment not covered by harmonized standards (TWG 3)

Results of the inquiry carried out in EU MS aiming at (1) the definition of the most critical issues during the inspection according to existing EN 13790 series and (2) identifying PAE types/technical items not yet considered by EN ISO 16122 series. 41

J.-P. Douzals, V. Polveche

Inspection of Fog and LVM application equipment in the Netherlands 52

M. Van Stokkum, J. Kole

The inspection of soil-disinfection equipment in Belgium. 55

J. Declercq, G. Defays, D. Nuyttens, B. Huyghebaert

Sprayer testing in the UK – an overview of the National Sprayer Testing Scheme 63

D. Russell

Session 4: “Certification” of the workshop activity (quality assurance) including test facilities (TWG 4)

Results of the enquiry carried out in EU MS in order to evaluate their quality assurance system for inspection activities carried out by workshops 65

P. Harašta, J. Kole

Quality assurance as a key point in effective sprayer inspection schemes. 73

J. Kole, P. Harasta

ENAMA “Certification” of the inspection workshop activity: the necessary requirements 81

G. Oggero, P. Balsari, P. Marucco, S. Liberatori, R. Limongelli

Consequences of including inspection of sprayers in use in the new Regulation on official controls 88

J. Wahlander

Inspections of accredited workshops: Some Italian experiences 93

M. Biocca, P. Gallo, G. Imperi, S. Petrillo, P. Spigno

Session 5: Harmonize the training of the inspectors to achieve the same professional level of the inspections (TWG 5)

Survey about training of sprayer inspectors and examination procedures for licencing of inspectors in Europe 97

E. Nilsson

Establishment of a picture gallery regarding training material for inspectors and using it during the testing procedure of pesticide application equipment in horticulture 99

H. Kramer, H. J. Wehmann

Manual for inspection of sprayers in use and PRITEAF, dedicated software for inspection of sprayers: success tools developed for the inspector’s training process in Spain 101

E. Gil, Á. Jiménez, F. J. García Ramos

Session 6: Minimum workshop facilities necessary to make an appropriate sprayer adjustment of orchard sprayer at the workshop during the inspection (TWG 6)

SPISE guidelines on how to make sprayer adjustment at the workshop as an addition to the functional inspection of field crop sprayers	110
<i>A. Herbst (Germany)</i>	
Performances evaluation of different vertical patternators	120
<i>D. Allochis, P. Balsari, M. Tamagnone, P. Marucco, P. Vai, C. Bozzer</i>	
Adjusting and Straightening the Air Distribution of Sprayers for Three Dimensional Crops: The State of the Art	133
<i>P. Triloff, K. Lind, W. Matzer, M. Knoll, S. Kleisinger</i>	

Session 7: Definition of a common risk assessment procedure for Pesticide Application Equipment (PAE) to be exempted from the inspection (TWG 2)

Results of the enquiry carried out on the NAP of the MS about the PAE to be exempted from the inspection and about the Risk Assessment methods applied.	139
<i>B. Huyghebaert, N. Bjugstad</i>	
Sprayer inspection parameters as a basis for risk assessment for human health and the environment	142
<i>J. K. Wegener</i>	
Development of a harmonized risk mitigation toolbox dedicated to environmental risks of pesticides in farmland in Europe: outcome of the MAgPIE workshop	148
<i>A. Alix, K. Knauer, M. Streløke, V. Poulsen</i>	

Posters

Determination of the influence of the driving speed on the application parameters of orchard sprayers	156
<i>R. A. Almbauer, K. Lind, W. Matzer</i>	
Summary of Discussion Workshop on technical status quo and adjustment procedures of sprayers during implementation of IPM in Poland	164
<i>T. Baranowski, M. Bzowska</i>	
Air flow characteristics – proposed as mandatory requirement for airblast sprayers	168
<i>Z. Czaczyk, G. Bäcker, R. Keicher, R. Müller</i>	
The comparison of the nozzle inspection methods in field crop sprayers: Nozzle flow vs. spray transverse distribution – methodology and some results	172
<i>A. Godyń, R. Hołownicki, G. Doruchowski, W. Świechowski</i>	
Electrostatic Method to Measure the Size of the Sprayed Droplets	175
<i>M. Kuna-Broniowski</i>	
User concerns about sprayer inspections in the Comunidad Valenciana (Spain). Importance of adequate communication for the higher involvement of stakeholders.	179
<i>C. Garcerá, E. Moltó, P. Chueca</i>	
Implementation status of mandatory inspection of sprayers in Romania	184
<i>E.M. Nagy, S. Bungescu, O. Ranta, P.V. Boros</i>	
Present situation of the inspection of sprayers in use in Spain	186
<i>F. Solanelles, F. Gracia, A. Fillat, F. Camp</i>	
Practical experience in running Field Sprayers Inspection Station, and measuring tools design and their implementation	191
<i>J. Zubek</i>
