Fig. 1: Sequence comparison of *X. fastidiosa pilG* and *E. coli cheY*. Conserved phospho-accepting residue in bold lettering and boxed.

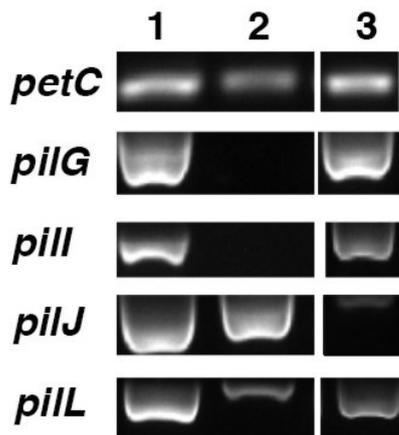

Fig. 2: *pilG*, *pilI*, *pilJ* and *pilL* gene expression in TM1,  $\Delta pilG-I$ , and  $\Delta pilJ$  by reverse transcription (RT)-PCR. **1)** TM1 = *X. fastidiosa* wild-type strain Temecula 1, **2)**  $\Delta pilG$  = TM1 deleted of *pilG* and also lacking expression of *pilI*, and **3)**  $\Delta pilJ$  = TM1 deleted of *pilJ*. RT-PCR was performed twice with two independently extracted RNA samples for each strain and analyzed with 1 % agarose gel with same results. *petC* (PD1775) encodes a ubiquinol cytochrome C oxidoreductase cytochrome C1 subunit was included as the reference gene.

Fig. 3: Biofilm formation and cell-to-cell aggregation of TM1,  $\Delta pilG-I$  and  $\Delta pilJ$  cells in PD2 broth 3 d post-inoculation. Cells were grown for ~ 7 d on PWG plates, suspended in 30 mL of PD2 broth to an  $OD_{600}$  of ~ 0.013 and incubated at 28 °C, 185 rpm for 3 d. TM1 = *X. fastidiosa* wild-type strain Temecula 1;  $\Delta pilG-I$  = TM1 deleted of *pilG* and also lacking expression of *pilI*;  $\Delta pilJ$  = TM1 deleted of *pilJ*.

Table S 1

## Primers

Purpose	Primer	Sequence (5' to 3')
<i>pilG</i> deletion	<i>pilGA</i>	CGCATCAGGATTATTTGCC
	<i>pilGB</i>	TTCGGCGCGCCGAATGCCAATATCCTCATGCGCA
	<i>pilGC</i>	TTCGGCGCGCCGAAGTACTGTTTCATCTGATGCG
